

**Correlation of Call Data for Calling and Called Parties
in Wireless Telecommunication Networks**

Abstract

10

Call data associated with one call is correlated from separate call records associated with the calling and called parties in which at least one of the parties is a wireless user. Statistical information is gathered based on whether one of the parties to the call subscribes to one call feature/service and the other party to the call subscribes to a predetermined call feature/service. This information is typically utilized by telecommunication service providers.
